

The only Track Maintenance you will ever need

Step 1:

Bend the end of a micro-fiber high-duster head at about a 90 degree angle.

Step 2:

Spray the inside of curve of the high-duster head with Pledge Revitalizing Oil.SM

(Do not over saturate, 1 squirt goes a long way!)

Step 3:

Run the high-duster along the top of the rail to clean and maintain Quiet Glide.

★ Recommended that you clean **at least monthly** utilizing the above process.
